

Lab 20: SQL

Apr 17, 2018

Main Event

1. SQL Zoo

SQL Zoo is a popular website for learning and practicing SQL. The site features several tutorials covering various SQL concepts; today we will do a subset. First, go to the [SQL Zoo main page](#). Ideally, you should attempt all of the sections, but what you should focus on today are tutorials 0 and 2, along with 6 and 7. In each, attempt the first 10 questions.

When you click on a section, you will be taken to a page with sets of queries, instructions, and an interactive terminal where you can “submit” your SQL. Use this web interface to get the queries right.

What to Submit

Once you have completed a tutorial, save/print the page to PDF. Submit the (PDF) files to NYU Classes. If you are unable to generate PDF files for any reason, a text file containing the SQL statements you wrote will suffice.
